

FREE GUIDE BY NUNYA BUNYA

THE \$0/MO MARKETING STACK

How to replace \$1,000+/mo in SaaS tools with a self-hosted open-source stack on a single \$10/mo server.

nunyabunya.com — Brisbane, Australia

THE PROBLEM

You're paying for a dozen tools that don't talk to each other. Here's what most small businesses are spending:

PAID TOOL	WHAT IT DOES	COST/MO	OPEN-SOURCE ALT.	COST
HubSpot	CRM	\$800+	Twenty CRM	\$0
Mailchimp	Email marketing	\$80+	Mautic	\$0
Google Analytics	Web analytics	\$0*	Matomo	\$0
Calendly	Booking	\$16	Cal.com	\$0
Bitly	Short links	\$35	Shlink	\$0
Zapier	Automation	\$50+	n8n	\$0
Tableau	Reporting	\$75+	Metabase	\$0

*Google Analytics is "free" but you're paying with your data. Google uses your visitors' data for ad targeting. With Matomo, you own everything — and you're GDPR compliant out of the box.

Total SaaS cost: **\$1,056+/mo** (\$12,672/year)

Total open-source cost: **~\$10/mo** for a Hetzner VPS (\$120/year)

Plus: you own your data, no vendor lock-in, and everything runs on infrastructure you control.

STEP 1: SERVER SETUP

Everything runs on a single Hetzner Cloud VPS. Here's how to get one running in 10 minutes.

1.1

CREATE A HETZNER ACCOUNT

Go to hetzner.com/cloud and sign up. Create a new project, then spin up a server:

- ☐ Location: Choose closest to your audience (Nuremberg for EU, Ashburn for US)
- ☐ Image: Ubuntu 22.04
- ☐ Type: CX21 (2 vCPU, 4GB RAM) — \$10/mo is plenty to start
- ☐ Add your SSH key for secure access

1.2

INSTALL DOCKER & DOCKER COMPOSE

SSH into your server and run:

```
# Update system
apt update && apt upgrade -y

# Install Docker
curl -fsSL https://get.docker.com | sh

# Install Docker Compose
apt install docker-compose-plugin -y

# Verify
docker --version
docker compose version
```

1.3

SET UP TRAEFIK (REVERSE PROXY + AUTO-SSL)

Traefik handles routing and auto-provisions SSL certificates for all your subdomains:

```
mkdir -p /opt/traefik && cd /opt/traefik
touch acme.json && chmod 600 acme.json
```

Create `docker-compose.yml`:

```
version: "3.8"
services:
  traefik:
    image: traefik:v2.10
    command:
      - "--providers.docker=true"
      - "--providers.docker.exposedbydefault=false"
      - "--entrypoints.web.address=:80"
      - "--entrypoints.websecure.address=:443"
      - "--certificatesresolvers.le.acme.httpchallenge=true"
      - "--certificatesresolvers.le.acme.storage=/etc/acme.json"
```

STEP 2: DNS & DOMAINS

Point subdomains to your server so each tool gets its own clean URL.

In your domain registrar (GoDaddy, Namecheap, Cloudflare, etc.), add A records pointing to your server's IP:

SUBDOMAIN	TOOL	TYPE	VALUE
crm.yourdomain.com	Twenty CRM	A	YOUR_SERVER_IP
mautic.yourdomain.com	Mautic	A	YOUR_SERVER_IP
analytics.yourdomain.com	Matomo	A	YOUR_SERVER_IP
reports.yourdomain.com	Metabase	A	YOUR_SERVER_IP
go.yourdomain.com	Shlink	A	YOUR_SERVER_IP
auto.yourdomain.com	n8n	A	YOUR_SERVER_IP
cal.yourdomain.com	Cal.com	A	YOUR_SERVER_IP

Tip: DNS propagation can take up to 48 hours, but usually takes 5–30 minutes. Don't start installing tools until your subdomains resolve. Use `ping crm.yourdomain.com` to check.

STEP 3: INSTALL YOUR TOOLS

Each tool gets its own Docker Compose file. Copy-paste these configs and you're running.

MAUTIC — EMAIL MARKETING & AUTOMATION

Replaces: **Mailchimp**, **ActiveCampaign**, **ConvertKit**

Open-source marketing automation. Email campaigns, drip sequences, lead scoring, forms, and segmentation. Unlimited contacts, unlimited emails.

```
mkdir -p /opt/mautic && cd /opt/mautic
```

Create `docker-compose.yml`:

```
version: "3.8"
services:
  mautic:
    image: mautic/mautic:latest
    environment:
      - MAUTIC_DB_HOST=mautic-db
      - MAUTIC_DB_USER=mautic
      - MAUTIC_DB_PASSWORD=CHANGE_THIS_PASSWORD
      - MAUTIC_DB_NAME=mautic
    volumes: [mautic_data:/var/www/html]
    labels:
      - "traefik.enable=true"
      - "traefik.http.routers.mautic.rule=Host(`mautic.yourdomain.com`)"
      - "traefik.http.routers.mautic.tls.certresolver=le"
    networks: [web, internal]
    restart: always
  mautic-db:
    image: mysql:8.0
    environment:
      - MYSQL_ROOT_PASSWORD=CHANGE_THIS_PASSWORD
      - MYSQL_DATABASE=mautic
      - MYSQL_USER=mautic
      - MYSQL_PASSWORD=CHANGE_THIS_PASSWORD
    volumes: [mautic_db:/var/lib/mysql]
    networks: [internal]
    restart: always
volumes:
  mautic_data:
  mautic_db:
networks:
  web: { external: true }
  internal:
```

```
docker compose up -d
```

Visit `mautic.yourdomain.com` and complete the setup wizard.

TWENTY CRM — CUSTOMER RELATIONSHIP MANAGEMENT

Replaces: [HubSpot](#), [Salesforce](#), [GHL](#)

Modern open-source CRM. Contacts, companies, deals, pipelines, tasks, and a powerful API.

```
mkdir -p /opt/twenty && cd /opt/twenty
```

```
version: "3.8"
services:
  twenty:
    image: twentycrm/twenty:latest
    environment:
      - SERVER_URL=https://crm.yourdomain.com
      - FRONT_BASE_URL=https://crm.yourdomain.com
      - PG_DATABASE_URL=postgres://twenty:twenty@twenty-db:5432/default
      - ACCESS_TOKEN_SECRET=generate-a-random-string
      - LOGIN_TOKEN_SECRET=generate-a-random-string
    labels:
      - "traefik.enable=true"
      - "traefik.http.routers.twenty.rule=Host(`crm.yourdomain.com`)"
      - "traefik.http.routers.twenty.tls.certresolver=le"
      - "traefik.http.services.twenty.loadbalancer.server.port=3000"
    networks: [web, internal]
    restart: always
  twenty-db:
    image: postgres:15
    environment:
      - POSTGRES_USER=twenty
      - POSTGRES_PASSWORD=twenty
      - POSTGRES_DB=default
    volumes: [twenty_db:/var/lib/postgresql/data]
    networks: [internal]
    restart: always
volumes:
  twenty_db:
networks:
  web: { external: true }
  internal:
```

MATOMO — WEB ANALYTICS

Replaces: [Google Analytics \(GA4\)](#)

Privacy-respecting analytics. Pageviews, sessions, referrers, goals. You own every byte. GDPR compliant without cookie banners.

```
mkdir -p /opt/matomo && cd /opt/matomo
```

```
version: "3.8"
services:
  matomo:
    image: matomo:latest
    environment:
      - MATOMO_DATABASE_HOST=matomo-db
      - MATOMO_DATABASE_USERNAME=matomo
      - MATOMO_DATABASE_PASSWORD=CHANGE THIS PASSWORD
```

METABASE — DASHBOARDS & REPORTING

Replaces: **Tableau, Looker, Google Data Studio**

Business intelligence dashboards. Connect to any database, build charts, share reports with clients.

```
version: "3.8"
services:
  metabase:
    image: metabase/metabase:latest
    environment:
      - MB_DB_TYPE=postgres
      - MB_DB_HOST=metabase-db
      - MB_DB_DBNAME=metabase
      - MB_DB_USER=metabase
      - MB_DB_PASS=CHANGE_THIS_PASSWORD
    labels:
      - "traefik.enable=true"
      - "traefik.http.routers.metabase.rule=Host(`reports.yourdomain.com`)"
      - "traefik.http.routers.metabase.tls.certresolver=le"
      - "traefik.http.services.metabase.loadbalancer.server.port=3000"
    networks: [web, internal]
    restart: always
  metabase-db:
    image: postgres:15
    environment: { POSTGRES_DB: metabase, POSTGRES_USER: metabase, POSTGRES_PASSWORD: CHANGE_THIS_PASSWORD }
    volumes: [metabase_db:/var/lib/postgresql/data]
    networks: [internal]
    restart: always
volumes: { metabase_db: }
networks:
  web: { external: true }
  internal:
```

SHLINK — BRANDED SHORT LINKS

Replaces: **Bitly, Rebrandly**

Short links with full click analytics. Track every link across email, social, and ads.

```
version: "3.8"
services:
  shlink:
    image: shlinkio/shlink:stable
    environment:
      - DEFAULT_DOMAIN=go.yourdomain.com
      - IS_HTTPS_ENABLED=true
    labels:
      - "traefik.enable=true"
      - "traefik.http.routers.shlink.rule=Host(`go.yourdomain.com`)"
      - "traefik.http.routers.shlink.tls.certresolver=le"
      - "traefik.http.services.shlink.loadbalancer.server.port=8080"
    networks: [web]
    restart: always
networks:
  web: { external: true }
```

STEP 4: CONNECT THE PIPELINE

Individual tools are useful. Connected tools are powerful. Here's how to wire everything together.

KEY INTEGRATIONS

- ☐ Website → Mautic: Add the Mautic tracking pixel to your site. Create Mautic forms or connect existing forms via API.
- ☐ Mautic → Twenty CRM: Use n8n to sync new Mautic contacts into Twenty CRM automatically.
- ☐ Mautic → Slack: Use n8n to post a notification when a new lead comes in.
- ☐ Matomo → Metabase: Connect Metabase to Matomo's MySQL database for custom dashboards.
- ☐ Shlink → Campaigns: Create tracked short links for every email, social post, and ad.

Cal.com note: Cal.com's self-hosted setup is more involved than the others. You can use their free hosted tier at cal.com to skip the Docker setup. We use the hosted version ourselves.

STEP 5: MAINTAIN YOUR STACK

Your stack is running. Here's how to keep it healthy.

UPDATES

Pull the latest images and restart. Do this monthly:

```
# Update everything at once:
for dir in /opt/traefik /opt/mautic /opt/twenty /opt/matomo /opt/metabase /opt/shlink /opt/n8n; do
  cd "$dir" && docker compose pull && docker compose up -d
done
```

BACKUPS

Back up your Docker volumes regularly with a cron job:

```
# Add to crontab (crontab -e) - runs daily at 3am
0 3 * * * docker run --rm \
  -v mautic_db:/data -v /backups:/backup alpine \
  tar czf /backup/mautic-db-$(date +%Y\%m\%d).tar.gz /data
```

MONITORING

- ☐ Check disk space monthly: `df -h`
- ☐ Monitor container health: `docker ps`
- ☐ Set up UptimeRobot (free for 50 monitors) for uptime alerts
- ☐ Keep your server OS updated: `apt update && apt upgrade -y`

Scaling: The CX21 (\$10/mo) handles most small businesses easily. If you hit limits, upgrade to CX31 (4 vCPU, 8GB, \$18/mo) with one click. No downtime.

NEED HELP SETTING IT UP?

If you'd rather have someone build the entire stack for you, we do that too. Book a free 15-minute call and we'll scope it out.
